			ART UNIT	PAPER NUMBER
			2871	

DATE MAILED: 06/27/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b>		<b>Applicant(s)</b>	
	09/852,077		SAKAMOTO, MICHIAKI	
	<b>Examiner</b>		<b>Art Unit</b>	
	Dung Nguyen		2871	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 03 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 14 April 2006.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 26,28-43,45 and 46 is/are pending in the application.
- 4a) Of the above claim(s) 28-41 is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 26,42,43,45 and 46 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 04/14/2006 has been entered.
2. Applicants' amendment dated 03/15/2006 has been received and entered. By the amendment, claims 26, 42-43 and 45-46 are now pending in the application.

### ***Claim Rejections - 35 USC § 103***

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
4. Claim 26 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Shimada et al., US Patent No. 5,852,485, in view of Kadota et al., US Patent No. 5,818,550 and Hayase et al., US Patent No. 5,702,776.

Regarding claims 26, Shimada et al. disclose an in-plane switching liquid crystal display (LCD) device having:

- . a pair of substrate (21, 212);
- . a gate insulating layer (23)
- . a protection layer (29) formed over the lower substrate (21)
- . a thin film transistor (TFT) formed on the lower substrate (21);

Art Unit: 2871

- . a color filter (218);
- . a liquid crystal layer (217) formed between the color filter (218) and substrate (212);
- . a common electrode (213) and a pixel electrode disposed between the color filter and the liquid crystal layer;
- . an alignment layer (216).

Shimada et al., however, do not disclose the color filter forming over the protective layer as well as a light shield on the protection layer. Kadota et al. et al. do disclose that a color filter (9) can be formed over a protective layer (4c) and a light shield (black mask 8c) formed on the protection layer (4c)(see figure 4). Therefore, it would have been obvious to one skill of ordinary in the art to employ the Shimada et al. color filter (218) over the protective layer (29) as shown by Kadota et al., since it has been held that rearranging parts of an invention involves only routine skill in the art (as evidence from Kadota et al.) as well as to employ a light shield on a protection layer so as to cover TFTs underneath..

In addition, Shimada et al., neither discloses a flat color filter nor an insulating layer forming between the pixel electrode and the common electrode. Hayase et al. do disclose a color filter (10) having a flat surface formed on a lower substrate (11). Therefore, it would have been obvious to one skilled in the art at the time of the invention was made to employ a color filter having flat-surface on both sides (upper surface and lower surface) in the Shimada et al. device as shown by Hayase et al., since it is a common practice in the LCD art in order to obtain a highly refined color filter in an LCD device (col. 2, ln. 8). In addition, one skilled in the art would have realized the desire to form an interlayer between two electrodes (e.g., pixel and common electrodes in different layers) for insulating such two electrodes. Therefore, it would

Art Unit: 2871

have been obvious to one of ordinary skill in the art at the time of the invention was made to form a common electrode under an insulating layer and a pixel electrode over the insulating layer in order to avoid cross-talk between two different electrodes.

5. Claims 42-43 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Shimada et al., US Patent No. 5,852,485, in view of Kadota et al., US Patent No. 5,818,550 and Hayase et al., US Patent No. 5,702,776, further in view of Xu et al., US Patent No. 6,023,317.

Regarding the above claims, the modification to the Shimada et al. discloses the claimed invention as described above except for compensation films forming between a substrate and a polarizing film. Xu et al. do disclose in figures 1-3 that an optical compensation film (e.g., positive and/or negative) can be disposed between a substrate and a polarizing film. Therefore, it would have been obvious to one skilled in the art to employ the optical compensation film in the Shimada et al. device in order to improve viewing characteristics (Xu et al., abstract).

6. Claim 45 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Shimada et al., US Patent No. 5,852,485, in view of Kadota et al., US Patent No. 5,818,550 and Hayase et al., US Patent No. 5,702,776, further in view of Kakinuma et al., US Patent No. 5,721,597.

Regarding claim 45, the modification to the Shimada et al. discloses the claimed invention as described above except for an organic material comprising monomers or oligomers added into the liquid crystal, and polymerized such liquid crystal compound. Kakinuma et al. disclose a liquid crystal layer can be formed by mixing monomers (or oligomers) into the liquid crystal, then polymerizing such liquid crystal compound (col. 6, lines 36-39). Therefore, it would have been obvious to one skilled in the art to employ the Shimada et al. liquid crystal layer by

Art Unit: 2871

polymerizing a liquid crystal compound including liquid crystal and monomers or oligomers in order to improve the high speed response in an LCD device (col. 10, ln. 21).

7. Claim 46 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Shimada et al., US Patent No. 5,852,485, in view of Kadota et al., US Patent No. 5,818,550 and Hayase et al., US Patent No. 5,702,776, further in view of Shim et al., US Patent No. 6,181,402.

Regarding claim46, the modification to the Shimada et al. discloses the claimed invention as described above except for the vertical orientation films. Shim et al. disclose a homeotropic LCD device by forming vertical alignment layers as shown in figure 3A. Therefore, it would have been obvious to one skilled in the art at the time of the invention was made to modify the Shimada et al. device having a vertical alignment layer as shown by Shim et al. in order to obtain an LCD device having a wide viewing angle (col. 2, line 11).

It should be noted that the method of manufacturing the device is merely a list of forming each component and each component must be formed to make the device; therefore, the method of manufacturing as stated above would be inherent to the device.

### ***Response to Arguments***

8. Applicant's arguments filed 03/15/2006 have been fully considered but they are not persuasive.

Applicants contends that the cited references fail to disclose forming a light shield on the protection layer and adjacent the flat color filter layer (amendment, page 7). The Applicants are directed to Kadota et al. figure 4 which disclose a black mask (8c) as claimed. Therefore, the combination of Shimada et al. and Kadota et al. do disclose such feature of light shield.

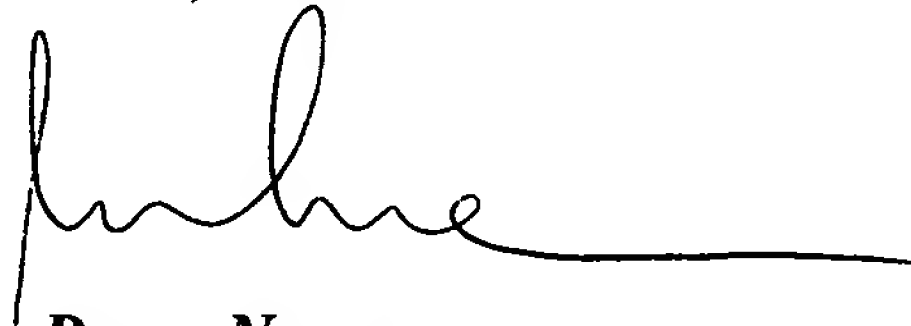

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dung Nguyen whose telephone number is 571-272-2297. The examiner can normally be reached on Tuesday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Nelms can be reached on 571-272-1782. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
